ASD Management Named by *Becker's ASC Review* AS a Top ASC Management and Development Company to Watch in 2011

Chicago—*Becker's ASC Review* recently released the "56 ASC Management and Development Companies to Watch in 2011" list, and ASD Management was included among the top ASC management and development companies.

Members of the list were selected for their leadership in developing and managing ASCs and surgical hospitals around the country.

The list was created through extensive research into the background of each company. All of the profiled companies have experienced success in at least one of the following areas: turnarounds, ASC development and management, surgical hospital management, consulting services and joint ventures. Individuals that lead these companies have far-reaching expertise, with years of executive healthcare and clinical experience, and often manage multiple healthcare facilities.

Companies do not pay and cannot pay to be included on this list.
